

AMENDMENTS TO THE SPECIFICATION

Applicants request that the Examiner replace the paragraph at page 3, lines 8—22 of the specification with the following amended paragraph:

Moves have been under way to relieve problems with the above related art techniques, including Korean Patent Publication Nos. 2002-4153 (Publication date: Jan 16, 2002, ~~hereinafter it is referred to as 'related art 1'~~), 2000-41692 (Publication date: July 15, 2000, ~~hereinafter it is referred to as 'related art 2'~~), 2000-36639 (Publication date: July 5, ~~hereinafter it is referred to as 'related art 3'~~), 2000-26077 (Publication date: May 6, 2000, ~~hereinafter it is referred to as 'related art 4'~~), and 2000-1206 (Publication date: Jan 15, 2000, ~~hereinafter it is referred to as 'related art 5'~~), ~~and~~ Japanese Utility Model registration No. 3050477 (Apr 30, 1998, ~~hereinafter it is referred to as 'related art 6'~~). According to the teachings of the above related arts, an audio mode (this is a state where audio sounds are output through a speaker) is not automatically changed to a hands-free mode (this is a state where a telephone conversation, not the audio sounds, is output through the speaker) until the driver (or the user) operates number keys on the mobile phone to input a telephone number, followed by pressing a 'send' key on his mobile phone. A further problem is that after the driver completes the call, he has to operate all conversion keys to switch the hands-free mode back to the audio mode.
